1. SCOPE

The specifications govern the performance of the following Nickel-Cadmium Cylindrical cell and its battery pack. (Refer to the attached figure 1)

Rated capacity: 2500mAh

Designation: NCTC2500 (26/49) (C) (D:25.8°-1.0mm H:50.0°-2.0mm)

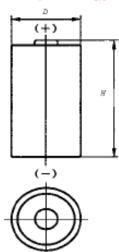

Figure 1- Jacketed cylindrical cells

2. DATA OF BATTERY PACK

The data of battery pack, including voltage and weight, is almost equivalent to the multiple numbers of the relevant single cells.

Example: Battery pack consisting three single cells

Nominal voltage of single cell = 1.2V

Nominal voltage of battery pack = 1.2V×3 = 3.6V

3. RATINGS

Table 1 - Ratings of the cells

Description	Unit	Specification	Conditions	
Nominal Voltage	V/Cell	1.2	Single cell	
Rated Capacity	mAh	2500	Standard Charge/Discharge	

4. PERFORMANCE

Unless otherwise stated, tests should be done within one month of delivery under the following conditions:

Ambient Temperature: 20±5°C Relative Humidity: 65±20%

Standard Charge/Discharge Conditions:

SPECIFICATIONS

Sealed Rechargeable Nickel Cadmium Button Cell NI-CD 2500mAh C (High Temperature)

Preparative: Prior to charging, the cell shall be discharged by 500mA (0.2 I_tA) to 1.0V

Charge: 250mA (0.1I_tA)×16hours Stand in charged condition:1~4h

Discharge: 500mA (0.2ItA) to 1.0V/Cell I

Table 2 – Performance and test methods

		I			
Test Item		Unit Specification		Test Conditions	Remarks
		h	≥5	Standard Charge/Discharge	/

a) Five cycles is permitted b) Unless otherwise stated, the cell shall be discharged by 500 mA (0.2 I_z A) to 1.0V before test. **Notice**: Test conditions is drawn according to IEC 61951-1 2003; Please refer to the related description of the standard.

5. CONFIGURATION, DIMENSIONS AND MARKINGS

Please refer to the attached drawing.

6. EXTERNAL APPEARANCE

The cell/battery shall be free from cracks, scars, breakage, rust, discoloration, leakage nor deformation.

7. CAUTION

- (1) Reverse charging is not acceptable.
- (2) Charge before use. The cells/batteries are delivered in an uncharged state.
- (3) Do not charge/discharge with more than our specified current.
- (4) Prevent short circuit, do not incinerate or disassemble the cell/battery.
- (5) Do not solder directly to the cell/battery for a long time.
- (6) The life expectancy may be reduced if the cell/battery is subjected adverse conditions like: extreme temperature, deep cycling, excessive overcharge/ over-discharge.
- (7) Store the cell/battery in a cool and dry place. Always discharge batteries before assemble or solder.
 - (8) Always discharge batteries before bulk storage or shipment.
 - (9) Do not mix batteries of different types and capacities.

Appendix

A) Endurance in cycles

Prior to the endurance on cycle test, the cell shall be discharged at 500mA (0.2 I_t A) to 1.0V. The following test shall be carried out in accordance with the conditions specified in Table 3.

Table 3 Endurance in cycles

Cycle number	Charge	Stand in charged condition	Discharge
1	0.1 <i>I</i> ₈ A for 16h	none	0.25ItA for 2h20min
2~48	0.25 <i>I_t</i> A for 3h10min	none	0.25 <i>I</i> ₈ A for 2h20min
49	0.25 <i>I_t</i> A for 3h10min	none	0.25I _t A to 1.0V
50	0.1 <i>It</i> A for 16h	1h~4h	0.20 <i>It</i> A to 1.0V ^a

a) Cycles 1 to 50 shall be repeated until the discharge duration on any 50th Cycle becomes less than 3h or the cell voltage drops below 1.0V during 1~48th cycle.

B) Permanent charge endurance

The permanent charge endurance test shall be performed in three steps according to the conditions specified in table 4.

It consists of:

- A charge acceptance test at +40°C;
- An ageing period of six months at +70°C;
- A final charge acceptance test to check the cell' s performance after ageing.

Cycle number	Ambient temperature	Charge	Discharge A or B ^a	Minimum discharge duration		
	0.057.1.5401	A: 0.2ItA to 1.0V or	N			
1	1	0.05I _t A for 48h	B: 1.0ItA to 1.0V	No requirement

,		0.05I _t A for 24h	B: 1.0ItA to 1.0V	24min		
a) A: for LT, MT, HT cells; B: for MT, HT cells only,						

C) Over charge

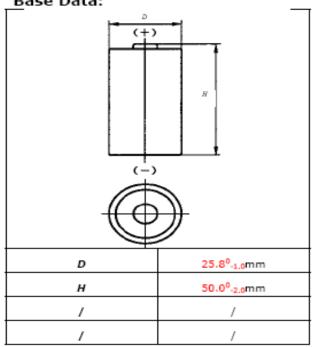

The ability of the cell to withstand an overcharge shall be determined by the following test at 0°C±2°C in circulating air.

The test shall be carried out according to the specified in table 5.

Table 5 Overcharge at 0°C

Charge	Discharge A ^a	Discharge B ^a		
	LT、MT、HT cells	MT、HT cells		
0.05 I _t A for 28d	A for 28d $0.2I_t$ A to $1.0V$ $1.0I_t$ A to $1.0V$			
a) The discharge is carried out immediately on the charging
